

Amirhossein Gholami

Backend Developer & DevOps Engineer

I'm someone who learns by building and builds by asking questions. I care about doing things properly, not just making them work, but making them last. And I genuinely enjoy sharing what I pick up along the way. For me, the goal has always been the same: write something that actually helps someone.

Work Experience

LogiOwn | Back-end Developer

Nov 2024 - March 2026

Full-time · United Arab Emirates

- At LogiOwn, I work on the backend of a live logistics platform, the part that has to be fast, consistent, and hard to break. I've reduced query times significantly by optimizing geospatial and relational queries, introduced Redis caching to cut redundant database hits, and offloaded heavy operations to async Celery workers so the API stays responsive under load.
- I also set up the CI pipeline, handle production issues when they come up, and try to leave the codebase in a better state than I found it. Most days I'm working closely with the frontend, product, and DevOps teams, which I actually like, because the backend doesn't exist in isolation.

Danoup Guys | Back-end Developer

Nov 2023 - Jul 2026

Full-time · Iran

- Started as a backend developer building web applications with Django, focusing on security and reliability. Early on, took ownership of the deployment side too, setting up CI/CD pipelines with GitLab, containerizing services with Docker, and configuring nginx for stable production environments.
- Spent a good chunk of time automating repetitive workflows, which cut down manual effort and freed the team to focus on actual work. Over time, grew into a hybrid development and DevOps role, working across teams, owning the full delivery cycle from code to production.

Hoopad Cloud | Back-end Developer

Jul 2023 - Oct 2023

Full-time · Iran

- My first professional experience was a 4-month internship at Hoopad Cloud as a backend developer. It was more than just coding I learned how real software teams work: joining sprints, contributing in meetings, improving soft skills, and collaborating with others. That experience gave me a solid understanding of the full software development lifecycle and set the foundation for everything I've done since

Education

Islamic Azad University, Software engineering, Bachelor

2025 - PRESENT

Contact

Skills

Back-End: Django, Gin, DRF, FastAPI, Celery, WebSockets

Front-End: HTML/CSS, Javascript, ReactJs

Databases: PostgreSQL, MySQL, Redis, SQLite,

DevOps: Linux, Ansible, Gitlab CI/CD, Docker, Bash Scripting, Nginx, Sentry, git

QA: Postman, unit testing, snapshot testing, Stress testing, TDD

Soft Skills

- Communication & Teamwork
- Proactive
- Solutions-oriented
- Commitment to quality
- Problem-Solving

Languages

- Persian (Native)
- English (Fluent)
- German (Proficient)

Certification

/Short Courses

- [Generative AI \(Microsoft\)](#)
- [AWS Certified Cloud \(CLF-C01\)](#)
- [Microservices: Design Patterns](#)
- [Learning Python](#)
- [GitHub Professional Certificate](#)

Publications

Multi thread and multi process in Python

- This article will be useful for all Python developers and enthusiasts.
